

# N20 Series

## silver coil

Solid silver coil started in mass production.

### ■ Technology

It requires delicate and special processing technology to employ the silver in a voice coil of an earphone as a wire material, while the silver is frequently used in an audio cable etc. for high quality hi-fi equipments etc. because of its high electrical conductivity. It requires much time and cost, but we have finally succeeded in mass-producing the “solid silver voice coil”.

### ■ Sound Feature

Overwhelming extent of sound field and of high resolution can be felt. Elongation and brilliancy of the treble can be said to be a major feature of solid silver coil. It is the most suitable voice coil for earphone to reproduce the high-resolution sound source in higher fidelity.
